

Installing the web annotation tool to a web server

We can install the tool either from the **war** file or from the **source code**.

1. From War File

To install the tool from the war file:

- a. Get the war file (**wbat.war**) attached to the email or from [this](#)
- b. Copy the war file to the web server (For **tomcat 6**, copy it to **{TomcatROOT}\webapps** and for **jboss 5** copy it to **{JbossROOT}\server\default\deploy**)
- c. Start the web server
- d. Point to {web server base URL}/wbat/ , for example <http://localhost:8080/wbat/>
- e. And start annotating

2. From the source code

For source code installation

- a. Get the source code, from attached email or from [this](#)
- b. Open the command line
- c. Go to the top level folder, wbat
`Cd wbat/`
- d. Run the ant file
`ant build`
- e. The command in d) creates the war file
- f. Follow Installation steps of 1) to install it in the web server
